

Objective

Avoiding gathering in company canteens without giving up professional catering services.

Markets

Corporate catering, canteens, catering service

Applications

Food delivery prepared in the company for employees to avoid crowding outside or to rationalize the lunch break.

Solution

Smart lockers managed remotely, with controlled temperature where you can have ready-to-eat food delivered by external catering.

FOOD DELIVERY IS EASIER WITH PICK IT UP!

In a very short time our habits have changed considerably as well as all the rules to follow. The use of smart working as well as the use of payroll subsidies and the fear of crowding have considerably reduced the influx of people into external company canteens and have complicated its regulation, making the client number uncertain. How can you handle it? Paraphrasing an old saying: if workers don't go to the canteen, the canteen will go to them! How? Thanks to the new smart temperature-controlled lockers for food delivery!

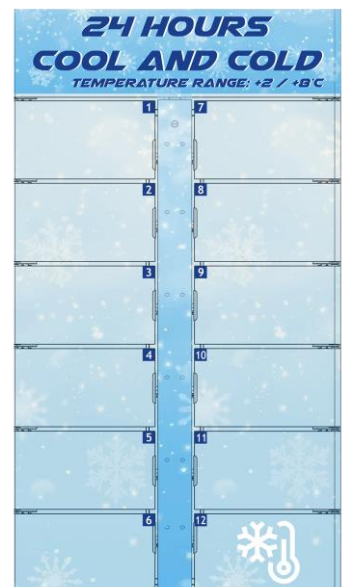

Objectives

The main objectives we want to achieve with our solution are:

- Getting back customers who avoid crowded places
- Improving meal planning and scheduling
- Retaining customers

A versatile solution

The Pick It Up smart locker solution is completely modular and therefore you can create your ideal composition to meet any need: temperature controlled-cabinets whether it is hot or cold.

«The new security measures and social distancing have also put the company professional catering into crisis. With the delivery directly to the company you can plan the need for meals to be prepared and make better use of time, both by the canteen staff and by the customers who can avoid queues and gatherings!»

How it works

The operation is simple and intuitive: the smart lockers are located within the companies that support the service. The canteen receives the orders and prepares the lunch boxes for each employee. When it arrives at the company for deliveries, it stores each meal in a cabinet by selecting the recipient from the touchscreen monitor. The list of recipients will be already uploaded in the software.

The employee gets a notification via SMS or E-mail informing him that his meal has been delivered! He can collect his meal simply by entering the code received, or meal voucher or company badge.

It is possible to integrate different types of locker opening systems by users as needed.

Management and control software

The Pick It UP management software is the heart of the application: it allows you to manage and monitor all connected lockers. On the management dashboard you can clearly check the status of each cabinet: available/occupied - closed/opened, etc. In this last case the system logs can verify by whom analyzing the credentials used.

The software can be integrated into existing solutions and allows you to choose the most suitable "key" to access the locker: password, QR code, RFID tag!

How it is composed

Each solution must have at least one master column that manages the cabinets. Then you can have additional columns for the collection and storage of objects. The software is included in all solutions.

A master column can manage up to 12 different modules, completely combinable with each other: different cabinet sizes, temperature-controlled, refrigerated or freezer cabinets.

The steel walls of the various modules are available in different colors.
