

Add Pick IT UP® to your laundry services!

Laundries are increasingly smart and to differentiate themselves from the competition they need to provide more services such as the pick up and automatic delivery of items to be cleaned. With our Pick IT UP® solution integrating the deposit and pickup service is very easy.

Thanks to Pick IT UP® the laundry can give customers an extra service by placing the lockers in different places such as large apartment building or in companies.

It has never been easier to deliver and pickup your garments!

ADVANTAGES OF THE LAUNDRY PICK IT UP® SOLUTION:

- Significantly increase the customer offering a service close to the customer and not at their own business
- Reduce the cost of renting the store no longer having to be in a central and visible place
- Simplify pickup and delivery operations and reduce customer waiting
- Increase availability times for pickup
- Increase presence and visibility in the territory in the case of Lockers outside the point of sale

ADVANTAGES OF THE PICK IT UP® SOLUTION FOR YOU:

- Differentiate themselves from the competition
- Sell UP with an innovative solution
- Higher earnings

A VERSATILE SOLUTION

The Pick IT UP® solution is totally modular in order to adapt to the spaces and need of every situation. You can choose between different combinations, both for the number of columns and for the number and size of the individual boxes.

Objective

Offer a fully automated and dislocated garment delivery and pickup solution compared to laundry

Market

Laundries and dry cleaners

Solution

Intelligent self-service lockers and dedicated management software for the delivery, storage and collection of garments to be treated, with or without payment for use

«With Pick IT UP® customers are more free in the delivery and pickup of their clothes, not being forced to respect the opening hours of the laundry»

How it works

The operation is simple and intuitive, can be integrated with an existing management solution or work with its own software. Pick IT UP® can be used both to store and pickup items to clean. An example of software flow is:

The customer has pre-registered on the laundry application, when he arrives at the locker he identifies himself and chooses the service to use, storage or collection. If deposited click on the appropriate function and based on the number of boxes available and the amount of items to deposit makes the deposit. The laundry receives a notification that the customer has delivered items, goes to the locker and pickup the clothes.

When the items are available for collection, the customer receives a notification with the amount for payment that can be made directly on the POS in the locker.

When the customer goes to the locker for pickup, after identifying himself, the amount to be paid is displayed. Make the payment with a credit or debit card and to confirm the transaction opens the box containing its items.

From the control platform you can monitor the status of all lockers, with the ability to set notifications in case the contents of the locker were not collected or returned within a certain period of time.

Lockers can be placed in the same space or in different places, even in different cities.

All lockers can be connected to a central server that allows you to monitor them remotely.

How it is composed

Each solution must consist of at least one master column that manages the lockers, one or more additional (optional) columns and management software.

A master column can handle up to 8 different add-on modules.

The walls of the standard version are signal white (RAL 9003), other colors are available and the service of graphic customization through wrapping.
